Example :

$$\frac{\partial U}{\partial s} = 0 \quad \text{stable, determinate}$$

Calculate the reactions for the shown beam .

$$\sum f_x, \sum f_y, \sum M, \sum M_h, \sum M_k = 0$$

$$\sum f_x = x_a = 0$$

$$\sum M_k = -6 \times 1 - 4 \times 2 - 6 \times 3 + y_c \times 4 - 4 \times 6 - 12 = 0$$

$$y_c = 17 \text{ t} \uparrow$$

$$\sum M_h = -9 \times 1.5 + y_b \times 3 - 6 \times 4 - 6 \times 5 - 4 \times 6 - 4 \times 7 - 6 \times 8 + 17 \times 9 - 4 \times 11 - 12 = 0$$

$$y_b = 27.5 \text{ t} \uparrow$$

$$\sum f_y = y_a - 6 - 9 + 27.5 - 6 - 6 - 6 - 4 - 6 + 17 - 4 = 0$$

$$y_a = 2.5 \text{ t}, \sum M_{h_{left}} = 6 \times 1 - 2.5 \times 3 + M_a = 0$$

$$M_a = 1.5 \text{ m.t}$$

check

Example :

$\text{dg} = \text{un}$

Calculate the reactions for the shown beam .

$$\sum f_x = x_a = 0$$

$$\sum M_{KK} = -60 \times 1.5 + y_b \times 3 - 60 \times 4.5 + y_c \times 6 = 0$$

$$y_b \times 3 + y_c \times 6 = 60 \times 1.5 + 60 \times 4.5 \rightarrow \textcircled{1}$$

$$\sum M_H = -100 \times 2 - 20 \times 5 - 60 \times 7.5 + y_b \times 9 - 60 \times 10.5 + y_c \times 12 = 0$$

$$y_b \times 9 + y_c \times 12 = 100 \times 2 + 20 \times 5 + 60 \times 7.5 + 60 \times 10.5 \rightarrow \textcircled{2}$$

$$y_b = 220 \text{ kN} \uparrow, \quad y_c = -50 \text{ kN} = 50 \text{ kN} \downarrow$$

$$\sum f_y = y_a - 100 - 20 - 60 + 220 - 60 - 50 = 0$$

$$y_a = 70 \text{ kN}$$

$$\sum M_{Hh} = -70 \times 2 + H_a = 0 \Rightarrow H_a = 140 \text{ kN.m}$$

Example :

حل افق
=

Calculate the reactions for the shown beam .

for part 1

$$\sum M_h = -100 \times 2 - 20 \times 5 + y_k \times 6 = 0$$

$$y_k = 50 \text{ kN} \uparrow$$

$$\sum F_y = y_h - 100 - 20 + 50 = 0 \Rightarrow y_h = 70 \text{ kN}$$

part 2

$$\sum F_y = y_a - 70 = 0 \Rightarrow y_a = 70 \text{ kN}$$

$$\sum M_a = M_a - 70 \times 2 = 0 \Rightarrow M_a = 140 \text{ kN.m}$$

$$\begin{aligned}\sum M_c &= 60 \times 1.5 - y_b \times 3 \\ &+ 60 \times 4.5 + 50 \times 6 = 0 \\ y_b &= 220 \text{ kN} \uparrow\end{aligned}$$

$$\begin{aligned}\sum F_y &= -50 - 60 + 220 - 60 + y_c = 0 \\ y_c &= -50 \text{ kN} \uparrow \Rightarrow y_c = 50 \text{ kN} \downarrow\end{aligned}$$
